PSC SOLAR (UK)

Africa's Solar Electricity Power

STEPS FOR SETTING UP THE MOBILE APP - INH ALL-IN-ONE SOLAR STREETLIGHT WITH CCTV CAMERA

1. Download CamHi app from playstore (android) or appstore (IOS), and install it.

2. Turn on the streetlight and wait for around 20~30 seconds for the camera to start up completely.

3. Turn on your mobile phone Wifi and search for the camera network. It is in the format 'IPCAM**'. Connect to this network(Password is 01234567).

4. Open the mobile app, and click on 'Add Camera'. A new window opens where you see different options for adding camera. You could choose "Scan QRcode" to use the Camera's QR code, "Search camera from LAN" to do an automatic search or manually enter the Camera UID code and password(password is 'admin') for the camera. Any of the three steps works.

5. After camera add, click on 'done' at the top right of screen to save settings.

6. Go back to home page. The added camera will show on the home, directly below the 'Add camera' button.

7. Click on the camera to start viewing the feed.

8. Next click on the Settings button on the camera(just added).

9. Go to Wifi Settings. System shows available Wifi networks.
